

NWTS

Nuclear Waste Tracking System

Shipment and storage records
for radioactive waste

Product overview
September 2026

Concept illustration

Operational information in context

A shipment record becomes more useful when it stays connected to storage work.

Operations

What arrived, what needs receipt, and where is work pending?

Supervision

Which transfers, conditions or stock differences need attention?

Administration

Who can act, which definitions apply, and what changed?

Three connected work areas

01

Shipments

Arrival and container profiles

02

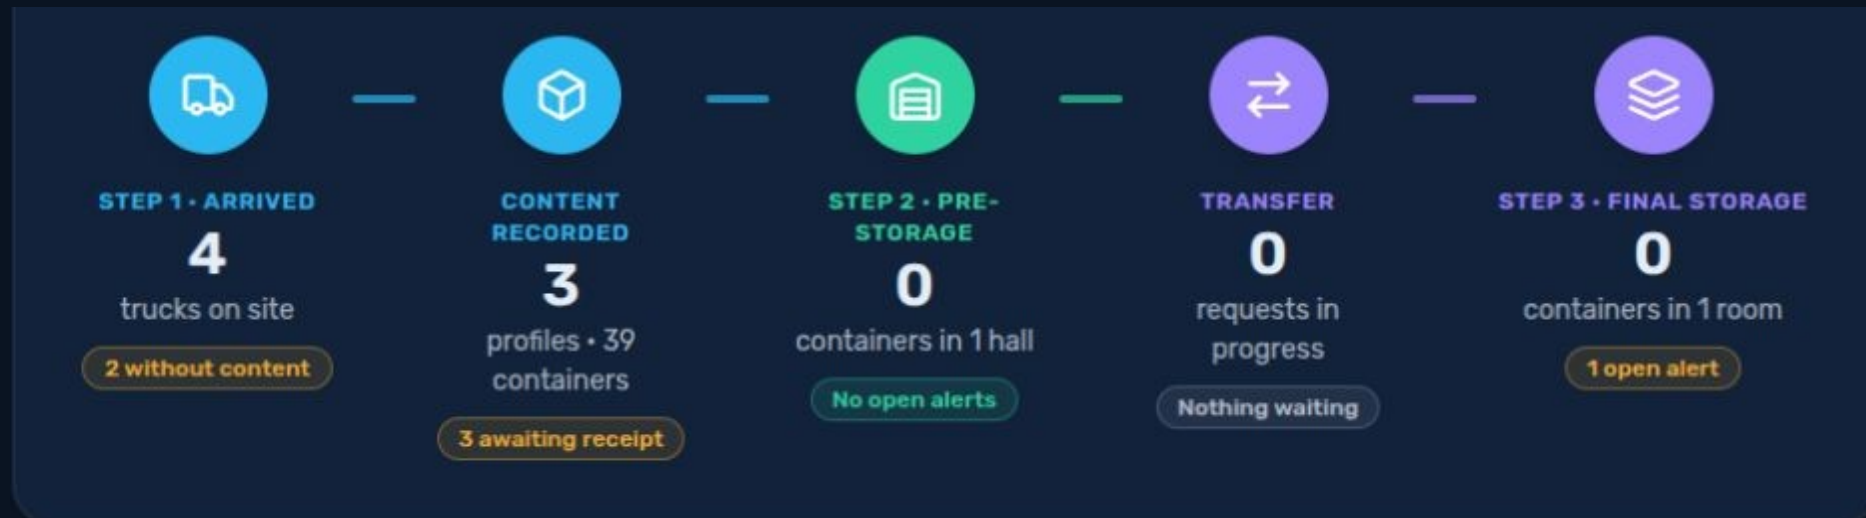

Pre-storage

Receipt, halls and handover

03

Final storage

Transfer requests and receipt

Application screenshots use demonstration data.

Process steps describe the work. User roles define the permitted actions.

Step 1: Shipment records

Arrival

Company, driver, registration plates and arrival time.

Contents

Quantity, origin, waste profile and container type.

Departure

Recorded departure with controlled corrections.

Example: 15 containers in one profile and 12 in another.

Shipments > Shipment #5

 **Shipment #5** IN - On site Pre-storage receipt

Transport GmbH · Driver Jusuf Basic · 23 TS 5047 · Entered 11 Sept 2026, 12:00

+ Add container profile Edit truck data Delete shipment Record departure

Container profiles (2) 27 containers in total

 **Profile #7** Awaiting receipt

Company	Transport GmbH
Driver	Jusuf Basic
Registration plates	23 TS 5047

Application screenshots use demonstration data.

Step 2: Pre-storage

Receipt

Review incoming profiles and record acceptance into a hall.

Storage

See recorded quantities, available space and conditions.

Handover

Process transfer requests using available source quantities.

The assigned employee works in the pre-storage workspace.

Step 2 • Pre-storage

Pre-storage halls

Choose a hall to receive containers, process transfers and record conditions.

Halls without measurement

1

Application screenshots use demonstration data.

Step 3: Final storage

Request

Select a destination room and request a transfer.

Response

Pre-storage checks the request and prepares the handover.

Receipt

Final storage confirms receipt and updates recorded stock.

The workflow separates the request, handover and receipt.

Step 3 • Final storage

Final storage rooms

Choose a room to request transfers, confirm receipt and record conditions.

Conditions and follow-up

Measurements

Temperature, radiation, humidity and pressure.

Alerts

Deviations, overdue readings and escalation status.

Actions

Acknowledgement, notes and closure history.

Based on recorded measurements.
No live sensor connection.

Alert #1

Warning • Measurement overdue

Escalated

Last measurement

#1 • 23 Sept 2026, 22:18 • expected every 12 h

Range used

Within range: up to 0.1 µSv/h. Danger: above 0.5 µSv/h. Warning otherwise. Expected every 12 h.
Default application values, not confirmed.

Opened

24 Sept 2026, 10:18

Condition

No new measurement yet

Handling

Not acknowledged

Escalated to Supervision

24 Sept 2026, 12:18 • No measurement within 2 h after it became overdue

Close after a new measurement is recorded.

Roles and responsibilities

Role	Work area	Main responsibility
Employee	One assigned step	Carry out permitted daily tasks
Supervision	All three steps	Oversee work and create Employee accounts
Administrator	All three steps	Manage accounts, definitions and controlled corrections

Each organisation has its own data. Permissions also depend on the action and record status.

Current scope and next development

Available in the prototype

Three operational workspaces

Receipt and transfer records

Recorded measurements and alert handling

Stock verification and correction records

Organisation access and user roles

To define with a pilot partner

Tracking each physical container individually

Sensor and external-system integrations

Background notifications

Site-specific validation and deployment

A pilot should test the agreed workflow with demonstration or approved test data.

A focused pilot

One organisation. One agreed workflow. Clear acceptance criteria.

- 1 Map the process** Confirm terminology, roles, locations and required records.
- 2 Run a demonstration** Follow one sample shipment through receipt and transfer.
- 3 Review the outcome** Check quantities, permissions and exception handling together.

Next step: a working session with an operational owner.

Function overview: operations

Area	Current functions	Result
Shipments	Arrival, search, IN/OUT, departure review	Transport record
Container profiles	Quantity, origin, waste and container definitions	Structured content record
Pre-storage	Incoming queue, receipt and hall records	Recorded location and quantity
Transfers	Request, response, sources and final confirmation	Documented handover
Final storage	Room records, receipts and capacity view	Recorded final-storage stock
History	Shipment events, receipts, transfers and corrections	Review of recorded activity

Function overview: oversight

Area	Current functions	Important boundary
Conditions	Measurements, rule versions and alerts	User-recorded values
Alert handling	Acknowledge, note, escalate and close	Evaluation during application use
Stock reconciliation	Counts, supported legacy links, correction reports	Corrections require Administrator rights
Overview and statistics	Pending work, capacity and movement summaries	Based on recorded data
Administration	Accounts, roles, areas and shared definitions	Within one organisation
Interface	English/German, dark/light, responsive navigation	Stored record names keep their original text

Permission summary

Action	Employee	Supervision	Administrator
Daily operational tasks	Assigned area	All areas	All areas
Prepare Container Profiles	No	While IN	Yes*
Correct an OUT shipment	No	No	Yes*
Create Employee accounts	No	Yes	Yes
Change accounts / definitions	No	No	Yes
Verify stock / apply correction	No	Verify	Verify + correct

* Subject to the record state and additional checks. This is a summary of current application rules.

Demonstration: one shipment

Stage	Example action	What the audience sees
Arrival	Record one demonstration truck	A shipment awaiting contents
Contents	Add profiles of 15 and 12 containers	27 containers in two groups
Receipt	Receive each group into a compatible hall	Stock linked to the receipt
Transfer	Request 5 from the group of 15	Request and handover status
Confirmation	Confirm receipt of those 5	22 in pre-storage, 5 in final storage

Illustrative scenario. Assumes empty starting stock and no other movements.
